

## DON'T MAKE AN OUBLIETTE OUT OF THE DRAIN

### Bath tub

- Rinse the bath well with water after use to remove dirt and soap residue.
- Make it a habit to clean it weekly with hot water and Feem Active Cleaner.
- Let it absorb for a quarter of an hour and rinse well.
- Dry the bath tub completely with a dry microfibre cloth.
- Stubborn lime can be removed the same way with some soapy water and cleaning vinegar.
- Never use abrasives or abrasive sponges to clean the bath, this can damage the surface!

### Shower

Just like with the bath tub, the shower must be cleaned regularly. It's best to clean the tap right after showering and go over the walls and shower door with a window wiper. Try cleaning the shower a little every week with some soapy water and Feem Active Cleaner.

Tip: When the tap drips, there can be yellow stains in the bath or shower. Treat these stains with some lemon juice and rinse with cold water.

### How can you unclog the drain in an environment-friendly way?

- Use rubber gloves and take all hairs and soap residue out of the drain.
- Pour a cup of baking soda in the drain and afterwards a cup of vinegar.
- Let this absorb for half an hour.
- Wash out the drain with boiling water afterwards.
